Korean phrasebook

From Wikivoyage, the free travel guide

“Korean phrasebook” from Wikivoyage (https://en.wikivoyage.org/wiki/Korean_phrasebook), by its contributors (https://en.wikivoyage.org/w/index.php?title=Korean_phrasebook&action=history), revision 5301909 of 2026-07-01, is licensed under CC BY-SA 4.0: <https://creativecommons.org/licenses/by-sa/4.0/>

Changes made for Hangeul: the pictures, the links and the section “Learning more”, “External links” left out; laid out as a PDF. This PDF is under CC BY-SA 4.0 too: you may share and adapt it, crediting Wikivoyage, under the same licence.

Korean phrasebook

Korean (한국어 *hangugeo* or 한국말 *hangugmal* in South Korea, 조선어 *chosŏnŏ* or 조선말 *chosŏnmal* in North Korea and China, 우리말 *urimal* (our language) or 국어 *gugeo* (national language) as a neutral denomination) is spoken in South and North Korea, as well as parts of Northeast China (where it is an official language in Yanbian). It may be distantly related to Japanese, but is certainly entirely distinct from Chinese, although it uses large amounts of imported Chinese vocabulary.

Depending on which part of Korea you go to different dialects of Korean are spoken. The standard in South Korea is based on the Seoul dialect, which is spoken in Seoul and Gyeonggi province as well as the city of Kaesong in North Korea, while the standard in North Korea is based on the Pyongan dialect, which is spoken in Pyongyang as well as North and South Pyongan provinces. Other dialects include the Gyeongsang dialect spoken in Busan, Daegu, Ulsan and the provinces of North and South Gyeongsang, the Jeju dialect spoken on the island of Jeju, and the Hamgyong dialect spoken in North and South Hamgyong provinces. The dialects spoken by the ethnic Korean minority in China also differ by region, with those from Jilin mainly speaking the Hamgyong dialect, those from Liaoning mainly speaking the Pyongan dialect, and those from Heilongjiang mainly speaking the Gyeongsang dialect. This guide is based on the standard in South Korea.

The Korean language is fundamentally the same in North and South Korea, and speakers from both sides of the border are, for the most part, able to understand each other. The main differences lie in the loan words used to represent modern concepts, where South Koreans typically use English words, and North Koreans typically use the corresponding Russian words or create new words instead. The standard form of Korean used by the ethnic Korean minority in China mostly follows the North Korean standard, albeit with a significant number of loan words from Mandarin for modern concepts, though due to the popularity of South Korean dramas, most people also understand South Korean terms.

Grammar

Korean sentence structure is very similar to that of Japanese, so speakers of Japanese will find many aspects of Korean grammar

familiar, and vice versa. But there are similar but slight differences to the standardized pronunciations, and the Korean language, even after its simplification in the past century, has a wider library of vowels and consonants than Japanese, hence Japanese speakers may find it difficult to pronounce various words, let alone transcribe them.

Korean word order is subject-object-verb: "I-subject him-object see-verb." Subjects (especially *I* and *you*) are often omitted if these are clear from the context. This may seem awkward from an English perspective, but English too has colloquial 1st-person/2nd-person subject omissions, such as "[Are you] Done yet?" or "[I'm] Done." It is a matter of whether sentences are common enough that such lack of subjects doesn't confuse the listener. In turn, some English colloquial sentences without subjects may be confusing from a Korean standpoint.

There are no articles, genders, or declensions. It has extensive verb conjugations indicating tense and honorific level. There is a handy, universal plural form, but it is very often omitted.

Korean has postpositions instead of prepositions: *jip mite*, "house below" instead of "below the house."

Koreans refer to each other rather in terms like elder brother, elder sister, younger sibling, uncle, aunt, grandmother, grandfather, manager, teacher etc. (like Nepali or Chinese) than by using the word *you*. Additionally, it's not uncommon to refer to yourself by using such an expression (example: "[I] Father will cook you a nice dinner." Which feels like saying "*This* father will..."). You can also call somebody an aunt, uncle or brother even if this person is actually not. Many Korean girls call even their boyfriend "oppa" (*older brother*).

Keep in mind that the words for older brother and older sister differ depending on the gender of the subject. The word for older brother is 형 (*hyeong*) if the subject is male, and 오빠 (*oppa*) if the subject is female, while the word for older sister is 누나 (*nuna*) if the subject is male, and 언니 (*eonni*) if the subject is female.

Depending on the relation to the person you have conversation with, it's necessary to find the correct level of formality and politeness. If the person is considered to be higher in the hierarchy, a very polite and formal form has to be used, while this person will use a more "vernacular" form to address you as a lower person. Koreans often ask very personal questions (about your age, occupation, family status etc.) in order to find out which form they should use when talking to you. This

phrasebook assumes the highest formality level in most cases. Not only are words conjugated according to 6 existing levels of formality (but 2 are becoming unused), but a few words will also be replaced with different words altogether. Extremely formal places will often use some Chinese postal words as well.

Pronunciation guide

The good news is that unlike Chinese, Korean is not tonal, so you don't need to worry about changing your pitch to get the meaning right. The bad news is that Korean has a few too many vowels for comfort and small distinctions between many consonants, so pronouncing things exactly right is still a bit of a challenge.

This phrasebook uses the **Revised Romanization of Korean**, which is overwhelmingly the most popular system in South Korea. The **McCune-Reischauer romanization**, used in North Korea and older South Korean texts, is noted in parentheses when different.

Vowels

Korean vowels can be short or long, but this is not indicated in writing and the distinction rarely if ever affects meaning. (example: 밤 bam, pronounced short means "night", pronounced long means "chestnut")

a ㅏ

like 'a' in "father"

o ㅗ

like 'o' in "tone"

eo (ö) ㅜ

like the "uh" in "lust"

u ㅜ

A low sound of "oo" as in "hoop". "woo" (Korean does not distinguish between "oo" and "woo").

eu (ü) —

like 'i' in "cousin", "dozen". Like the Turkish "ı", Polish "y" or Russian "ы". Kind of similar to the French "eu", but as a clearer, purer vowel sound.

i ㅣ

like the 'i' in "ship" (short) OR the 'ee' in "sheep" (long)

e ㅔ

like the 'e' in "bed"

ae ㅐ

similar to the "a" in "hand", "valve", "gas", and "can"

- note: ㅞ ae is now virtually identically pronounced as ㅟ e. Only rare words are unconsciously pronounced differently like they were half a century ago ("애", or "child" is one such remnant).

Common diphthongs

Korean has two standalone diphthongs:

oe ㅟ

like 'we' in 'west' (it used to be a different sound, now pronounced the same as ㅟ shown below)

ui ㅢ

like 'ü' + 'i'

In addition, most vowels can be modified by prefixing them with 'y' or 'w':

wa ㅘ

like 'wa' sound in "suave"

wae ㅙ

like 'wa' in "wagon". Some would argue there is virtually no difference anymore from ㅟ.

wo ㅚ

like 'wuh' sound in "wonder"

wi ㅝ

like "we" or 'e' in "she" with rounded lips

we ㅞ

like 'we' in "west"

ya ㅟ

like 'ya' in "yard"

yo ㅟ

like 'yo' in "yosemite" or "New York". **Not** like "yaw" or "yoke".

yeo (yö) ㅟ

like 'you' in "young"

yu ㅠ

like "you"

ye ㅟ

like 'ye' in "yes"

yae ㅟ

like 'ye' in "yes"; it has virtually assimilated to be the same as 'ㅟ'

- to summarize the assimilated vowel diphthongs mentioned above,
ㅟ = ㅟ = ㅟ = 'we' in "west" ㅟ = ㅟ = 'ye' in "yes"

Consonants

Most Korean consonants come in three versions, namely **unaspirated** (without a puff of air), **aspirated** (with a puff of air) and **tensed** (stressed). Unaspirated consonants exist in English too, but never alone: compare the sound of 'p' in "pot" (aspirated) and "spot" (unaspirated). Many English speakers find it helpful to pronounce an imperceptible little "m" in front to 'stop' the puff. Tensing isn't really found in English, but pronouncing the consonant quick and hard is a reasonable substitute.

b (p) ㅂ

like 'p' in "spit" (unaspirated)

p (p', ph) ㅍ

like 'p' in "pig" (aspirated)

pp ㅃ

tensed 'p', like 'p' in "petit" in French

d (t) ㄷ

like 't' in "stab" (unaspirated)

t (t', th) ㅌ

like 't' in "top" (aspirated)

tt ㄸ

tensed 't'

g (k) ㄱ

like 'k' in "skate" (unaspirated)

k (k', k) ㅋ

like 'c' in "cat" (aspirated)

kk ㄲ

tensed 'k'

j (ch) ㅈ

like 'g' in "gin" (unaspirated)

ch (ch') ㅊ

like 'ch' in "chin" (aspirated). Usually pronounced as a light aspirated 't' as a final consonant

jj ㅉ

tensed 'j'

s ㅅ

like 's' in "soon", 'sh' before *i* or any "y" diphthong. Usually pronounced as a very light 't' as a final consonant

ss ㅆ

tensed 's', 's' in 'sea', never 'sh'

Standalone consonants:

n ㄴ

like 'n' in "nice"

m □

like 'm' in "mother"

l ≡

somewhere between 'l', 'r' and 'n', original sound is 'r' or 'l'. and 'n' sound occurs through initial consonant mutation.

h ≡

like 'h' in "help"

ng ○

like 'ng' in "sing". Unpronounced (placeholder) when at the start of a syllable.

While the rules above are usually correct for the first consonant, those in the middle of a word are usually (but not always) **voiced**, which means that **ㅂ ㄸ ㅈ ㅊ** turn into English "b", "d", "j" and "k". The best rule of thumb is to concentrate on remembering that the first consonant is "special" and the rest are more or less as in English: *bibimbap* (비빔밥) is pronounced "pee-bim-bap", not "bee-bim-bap" or "p'ee-bim-bap".

Also, if one syllable ends with a consonant other than "ng" and is immediately followed by one that starts with a vowel, similar to *liaison* in French, the final consonant of the first syllable is instead pronounced as if it were the initial consonant of the second syllable. If a syllable ends with "h" and is preceded by a syllable that ends in a consonant, the "h" is dropped, and the ending consonant of the previous syllable is pronounced as if it were the initial consonant of the second syllable.

The aspirated spellings with "h" are used only in the official North Korean orthography.

Loanwords

Native Korean words can end only in vowels or the consonants *k*, *l*, *m*, *n*, *ng*, *p* or *t*, and any words imported into Korean are shoehorned to fit this pattern, usually by padding any errant consonants with the vowel *eu* (ㅡ). For example, any English word ending in "t" will be pronounced as *teu* (트) in Korean, eg. *Baeteumaen* (배트맨) for "Batman". In addition, the English sound "f" is turned into *p* and has that vowel tacked on, so "golf" becomes *golpeu* (골프).

Written language

“	A wise man can acquaint himself with them [hangul] before the morning is over; a stupid man can learn them in the space of ten days.	”
---	--	---

Useful Hanja

Hangul is the main script used in modern Korea, although the legacy of Hanja from the past remains relevant, and even South Koreans who claim to not know any hanja are usually able to recognize a few basic ones when prompted. You will sometimes see hanja in South Korea, for example at Buddhist temples or in newspaper headlines:

男 (남 *nam*)

Men

女 (여/녀 *yeo/nyeo*)

Women

大 (대 *dae*)

large

中 (중 *jung*)

center/medium

小 (소 *so*)

small

水 (수 *su*)

water

山 (산 *san*)

mountain

寺 (사 *sa*)

Buddhist temple

街 (가 *ga*)

street

美國 (미국 *miguk*)

United States.

英國 (영국 *yeongguk*)

United Kingdom

中國 (중국 *jungguk*)

China

日本 (일본 *ilbon*)

Japan

韓國 (한국 *hanguk*)

South Korea, or the entire Korean peninsula

北韓 (북한 *bukhan*)

North Korea

The country names listed above are often shortened to just the first character in newspaper headlines.

Korean is generally written using a native alphabet known as **hangul** (**chosongul** in North Korea and China). Designed by King Sejong the Great of the Joseon Dynasty in an attempt to increase literacy rates and rather scary-looking at first, it's in fact a very logical alphabetic writing system *far* easier than Chinese characters or even the Japanese *kana*

syllabary, and it's well worth putting in the time to learn them if staying in Korea for more than a day or two.

The basic idea is simple: hangul consists of letters called *jamo* combined into square blocks, where each block represents a syllable. The block is always in the order (consonant)-vowel-(consonant), stacked from top to bottom, where ㅇ is used as the first jamo if the first consonant is missing, and the space for the last consonant can be left empty if missing. For example, the word *Seoul* (서울) consists of the syllables seo (ㄱ s plus ㅣ eo, no final consonant) and ul (ㅇ plus ㅜ u plus ㄹ l). Tensed consonants are created by doubling the jamo (ㄱ s → ㄲ ss) and y-vowel diphthongs have an extra dash tacked on (ㅏ a → ㅑ ya). And that's pretty much it!

Classical Chinese was the literary language in Korea until the fall of the Joseon Dynasty in 1910, and many Korean words can also be written using Chinese characters, known as **hanja** in Korean. These were abolished in North Korea in 1949 and in South Korea in 1968, though they may still show up in restaurant menus and signs as an aesthetic choice. Otherwise, the few times you might encounter them are in brackets next to the hangul to describe an unfamiliar term or distinguish a term from a homophone, in some newspaper headlines, and in some legal documents.

Importance of Hanja Disambiguation

In early 2009, approximately 15,500 rail fasteners on KTX tracks were found defective for failing their waterproof test. Why? Because the hangul terms for "waterproof" and "water-absorption" are both written 방수, and the contractor didn't provide hanja disambiguation — which for those terms would be 防水 and 放水, respectively. The manufacturer then used water-absorbent material on the tracks, resulting in thousands of defects.

While Chinese characters are seldom written, many words themselves are simply Chinese loan words written as they are pronounced — not according to the Mandarin pronunciation, but according to the standardized Korean pronunciation of those same characters used in Chinese. Like Greek and Latin words in English, Chinese words are often found in the more formal and less vernacular sciences, and even more so with 19th-century new Chinese words coined by the Japanese, and used in both Korea and China. Japanese, Vietnamese, and Chinese speakers may find some familiarity with some of these overlapping Chinese terms, although pronunciations are different and Koreans only write out sounds and not the original Chinese characters. Although not nearly as much as Cantonese, Korean pronunciation of Chinese words

retains more medieval Chinese pronunciations of the Tang dynasty some 1300 years ago, than the Northeast dialect-influenced modern Mandarin.

Due to American influences since the end of World War II, by far the largest number of non-Chinese loan words in modern Korean as spoken in South Korea come from American English. The Korean words for many modern concepts are essentially the same as the English ones (eg. hotel (호텔), taxi (택시), computer (컴퓨터)), but will be written in hangul. If you can learn how to read hangul, as an English speaker, you will find it surprisingly easy to read many signs.

Regional differences

The official pronunciation of words differs somewhat between North Korea and South Korea. One noticeable difference is that for Sino-Korean words, the initial "r" in North Korea typically gets dropped in South Korea when before an "i" or "y", and becomes an initial "n" otherwise, so Korean cold noodles is known as 랭면 *raengmyeon* in North Korea, but 냉면 *naengmyeon* in South Korea, while the common Korean surname typically transliterated as "Lee" in English is 리 *Ri* in North Korea, but 이 *Yi* in South Korea. The initial "n" in North Korea gets dropped when before an "i" or "y" in South Korea, so the word for "woman" is 녀자 *nyeoja* in North Korea, but 여자 *yeoja* in South Korea.

In addition to differences in accent, there are some vocabulary differences in the standard form of Korean language between South Korea and North Korea. One of the most noticeable differences is that South Koreans use many loan words from American English due to heavy American influences, while North Koreans will usually coin their own terms, or use loan words from other languages (especially Russian) instead. Some loanwords from a common origin are transliterated differently in the two standard forms. For example "computer" is "컴퓨터" (*keompyuteo*) in South Korea and "콤퓨터" (*komp्यूteo*) in North Korea.

Ethnic Koreans from China generally follow the North Korean standard, though they are more likely than North Koreans to understand South Korean terms due to the popularity of South Korean dramas and pop culture in China. In addition, many loan words from Mandarin have been incorporated into the Korean language in China.

English	South Korea	North Korea	Yanbian
ballpoint pen	볼펜 <i>bolpen</i>	원주필 <i>wonjupil</i>	원주필 <i>wonjupil</i>
tomato	토마토 <i>tomato</i>	일년감 <i>illyeon'gam</i>	일년감 <i>illyeon'gam</i>
computer	컴퓨터 <i>keompyuteo</i>	콤퓨터 <i>komp्यूteo</i>	뎨노 <i>ttenno</i>
traditional Korean clothing	한복 <i>hanbok</i>	조선옷 <i>joseonot</i>	조선옷 <i>joseonot</i>
traditional Korean house	한옥 <i>hanok</i>	조선집 <i>joseonjip</i>	조선집 <i>joseonjip</i>

Another noticeable difference between the Korean language in South Korea, and that among the ethnic Korean minority in China is the way in which Chinese place names and personal names are translated. While South Koreans phonetically transliterate the Standard Mandarin names into hangul, ethnic Koreans from China instead use the conventional Sino-Korean readings of the characters that make up their Chinese names. For example, Beijing is known to South Koreans as 베이징 (*Beijing*) but to ethnic Koreans from China as 북경 (*Bukgyeong*), while Shanghai is known to South Koreans as 상하이 (*Sanghai*) but to ethnic Koreans from China as 상해 (*Sanghae*). Therefore, Chinese cities with large ethnic Korean communities usually have a different local Korean name from the South Korean name; for instance, Yanji is known as 연길 (*Yeon-gil*) to the local ethnic Koreans, but 옌지 (*Yenji*) to South Koreans. As an example for personal names, Chinese president Xi Jinping is 시진핑 (*Si Jin-ping*) to South Koreans but 습근평 (*Seup Geun-pyeong*) to ethnic Koreans from China.

Phrase list

Common signs

In the list below, the hanja is written in parentheses next to the hangul for those terms that you might encounter in hanja in day-to-day life. These are among the few basic hanja that are still widely understood by South Koreans today, so you may see them in signs and menus on their own without the corresponding hangul.

Basics

Hello. (*formal*)

안녕하십니까. (*annyeonghasimnikka*) Common in North Korea, Yanbian, provincial South Korea.

Hello.

안녕하세요. (*annyeonghaseyo*) Common in South Korea. to older people or to the people to meet first

Hello. (*informal*)

안녕. (*annyeong*) to your friend or younger people

Hello. (*on the phone*)

여보세요. (*yeoboseyo*) when you answer the phone.

How are you?

어떻게 지내십니까? (*eotteoke jinaesimnikka?*)

Fine, thank you.

잘 지냅니다, 감사합니다. (*jal jinaemnida, gamsahamnida*)

What is your name?

성함이 어떻게 되세요? (*seonghami eotteoke doeseyo?*)

My name is _____ .

제 이름은 _____입니다. (*je ireumeun _____imnida*)

Nice to meet you.

만나서 반갑습니다. (*mannaseo ban-gapseumnida*)

Please.

부탁합니다. (*butakamnida*)

Thank you.

감사합니다. (*gamsahamnida*)

You're welcome.

천만입니다. (*cheonmanimnida*)

Yes.

예/네. (*ye/ne*)

No.

아니요. (*aniyo*)

Excuse me. (getting attention)

실례합니다. (*sill(y)e hamnida*)

I'm sorry.

죄송합니다. (*joesonghamnida*) or 미안해 (*mianhae*)

Goodbye

안녕히 가십시오/계십시오. (*annyeonghi gasipsio/gyesipsio*). The former expression is used by the person staying (e.g. the host), the latter by the person leaving (e.g. a guest).

Goodbye (informal)

안녕. (*annyeong*)

Is there someone here who speaks English?

여기에 영어를 하시는 분 계십니까? (*yeogie yeong-eoreul hasineun bun gyesimnikka?*)

Please speak slowly.

천천히 말해 주십시오. (*cheoncheonhi malhae jusipsio*)

Please say it again.

다시 한번 말해 주십시오. (*dasi hanbeon malhae jusipsio*)

I can't speak {language} [well].

저는 {언어를} [잘] 못합니다. (*jeoneun {eoneoreul} [jal] motamnida*)

I can't speak English [well].

저는 영어를 [잘] 못합니다. (*jeoneun yeong-eoreul [jal] motamnida*)

Do you speak {language}?

_____를 하십니까? (*_____reul hasimnikka?*)

English

영어 (*Yeong-eo*)

German

독일어 (*Dogireo*)

French

프랑스어 (*Peurangseueo*)

Korean

Where?

어디입니까? (*eodiimnikka?*)

Who?

누구입니까? (*nuguimnikka?*)

When?

언제입니까? (*eonjeimnikka?*)

Which?

어느 것입니까? (*eoneu geosimnikka?*)

How much?

얼마나요? (*eolmanayo?*)

How do you say _____ in Korean?

_____은 한국말로 어떻게 말합니까? (*_____eun Han-gungmallo eotteoke malhamnikka?*)

What is this/that called?

이것은/저것은 무엇이라고 부릅니까? (*igeoseun/jeogeoseun mueosirago bureumnikka?*)

Problems

Leave me alone.

혼자 내버려 두십시오. (*honja naebeoryeo dusipsio*)

Don't touch me!

만지지 마십시오! (*manjiji masipsio!*), 만지지 마! (*manjiji ma!*, informal)

I'll call the police.

경찰을 부르겠습니다! (*gyeongchareul bureugetseumnida!*)

Police!

경찰! (*gyeongchal!*)

Stop! Thief!

서라! 도둑이야! (*seora! dodugiya!*)

I need your help.

당신의 도움이 필요합니다. (*dangsinui doumi piryohamnida*)

It's an emergency.

응급 상황입니다. (*eunggeup sanghwang-imnida*)

I'm lost.

길을 잃었습니다. (*gireul ireotseumnida*)

I lost my bag.

가방을 잃었습니다. (*gabang-eul ireotseumnida*)

I lost my wallet.

지갑을 잃었습니다. (*jigabeul ireotseumnida*)

I'm sick.

아픕니다. (*apeumnida*)

I've been injured.

상처를 입었습니다. (*sangcheoreul ibeotseumnida*)

I need a doctor.

의사가 필요합니다. (*uisaga piryohamnida*)

Can I use your phone?

당신의 전화기를 사용해도 되겠습니까? (*dangsinui jeonhwagireul sayonghaedo doegetseumnikka?*)

Numbers

Korean has two sets of numbers, namely **native** Korean numbers and **Sino-Korean** numbers (which are borrowed from Chinese). Both come

in handy, but in a pinch, the Sino-Korean series is more important to learn.

Sino-Korean numbers

Sino-Korean numbers are used for amounts of **currency**, reading a sequence of numbers (e.g. telephone numbers, ID card numbers or serial numbers), floor numbers and the 24-hour clock.

Native Korean numbers

Native Korean numbers are used for counting, specifying most quantities (with the relevant **counting words**) and for hours.

Counting words

Similar to Chinese and Japanese, Korean uses **counter** words when counting objects. For example, "two beers" is *maekju dubyeong* (맥주 2병), where *du* is "two" and *-byeong* means "bottles". There are many counters, but the most useful ones are *myeong* (명) for people, *jang* (장) for papers including tickets, and *gae* (개) for pretty much anything else (which is not always strictly correct, but will usually be understood and is growing in colloquial usage).

objects (apples, sweets)

개 *-gae*

people

명 *-myeong*, 분 *-bun* (polite)

flat paper-like objects (papers, tickets, pages)

장 *-jang*

bottles (or other glass or ceramic containers for liquid with a narrow mouth)

병 *-byeong*

cups, glasses

잔 *-jan*

animals

마리 *-mari*

times

번 *-beon*

machines (cars, computers)

대 *-dae*

long objects (pens, rifles)

자루 *-jaru*

books

권 *-gwon*

small boxes (cigarettes, etc.)

갑 *-gap*

large boxes

상자 *-sangja*

trees

80

여든 (yeodeun)

90

아흔 (aheun)

Numbers 100 and above are always counted with Sino-Korean numbers in South Korea, whereas North Korean uses a combination in which the part over 100 is read as Sino-Korean and the remaining part is not, e.g.

105 will be 백 다섯.

two o'clock PM

오후 두 시 (*ohu du si*)

midnight

자정 (*jajeong*)

Duration

Sino-Korean numbers are used to count minutes and days, while native Korean numbers are used to count hours. Months and years may be counted using either system, depending on which counter is used, while both systems can be used interchangeably to count weeks. However, durations from 1 day to 10 days, as well as 15 days and 30 days, have

special words that are commonly used instead of the regular forms stated here.

_____ **minute(s)**

_____ 분 (___ *bun*)

_____ **hour(s)**

_____ 시간 (___ *sigan*)

_____ **day(s)**

_____ 일 (___ *il*)

_____ **week(s)**

_____ 주 (___ *ju*) / _____ 주일 (___ *ju-il*)

_____ **month(s)**

_____ 달 (___ *dal*) / _____ 개월 (___ *gaewol*)

Note: 달 is used with native Korean numbers, while 개월 is used with Sino-Korean numbers

_____ **year(s)**

_____ 년 (___ *nyeon*) / _____ 해 (___ *hae*)

Note: 년 is used with Sino-Korean numbers, while 해 is used with native Korean numbers

Number of days

Days of the week

Sunday

일요일 (*iryoil*)

Monday

월요일 (*woryoil*)

Tuesday

화요일 (*hwayoil*)

Wednesday

수요일 (*suyoil*)

Thursday

목요일 (*mogyoil*)

Friday

금요일 (*geumyoil*)

Saturday

토요일 (*toyoil*)

Days of the month

The days of the month in Korean are just the Sino-Korean numbers for 1-31 followed by the word 일 (*il*, meaning "day")

First day of the month

1일 (*i-ril*)

Second day of the month

2일 (*i-il*)

Third day of the month

3일 (*sa-mil*)

Fourth day of the month

4일 (*sa-il*)

Months

The names of the months in Korean are simply the Sino-Korean numbers 1 through 12 followed by the word 월 (*wol*, meaning "month").

January

1월 (일월) *irol*

February

2월 (이월) *iwol*

March

3월 (삼월) *samwol*

April

4월 (사월) *sawol*

May

5월 (오월) *owol*

June*

6월 (유월) *yuwol*

July

7월 (칠월) *chirwol*

August

8월 (팔월) *parwol*

September

9월 (구월) *guwol*

October*

10월 (시월) *siwol*

November

11월 (십일월) *sibirwol*

December

12월 (십이월) *sibiwol*

- The number component of 6월 and 10월 drop the final consonant for purposes of liaison.

Writing time and date

Koreans generally write the date in yyyy.mm.dd format (e.g. 2006.12.25 for December 25th, 2006).

October 4th, 2019

2019년 10월 4일 (이천십구년 시월 사일) *icheon-sipgunyeon siwol sa-il*
